

### REMARKS

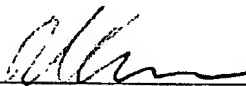

The Office Action of 09/13/2007 has been carefully considered. Reconsideration in view of the present remarks is respectfully requested.

Claims 1, 3, 5, 6 and 8-14 were rejected as being unpatentable over Watanabe in view of Na. This rejection is respectfully traversed and reconsideration requested.

Far from suggesting the present invention, Na in fact teaches away from the present invention. Na does not teach or suggest a single PLL having a first filter response in transmit mode and a second filter response in receive mode. Rather, Na teaches *separate transmit and receive PLLs* (PLL1 and PLL2) with their own respective loop filters (LF 219 and LF 225). The loop of PLL2 is opened during transmit mode to reduce distortion. There is, however, no switching between filters as claimed in various ones of the claims.

Allowance of claims 1, 3 and 5-20 is respectfully requested.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'M. J. Ure', is written over a horizontal line.

Michael J. Ure, Reg. 33,089
